

MOLUK CLEANING GUIDE

Safety and longevity are always the top priorities when we design our toys. Easy cleaning plays an essential part in this, especially during the current times of COVID-19.

Most MOLUK toys are cast in one seamless piece. So there are no inaccessible parts, joints or crevices where germs could hide. We only use high-quality, food-grade materials that are very durable and easy to clean. None of our toys use surface paint that could come off during vigorous cleaning.

In most cases, washing the toys thoroughly with water and soap is sufficient to remove any germs. For extra safety, you can wipe the surfaces with disinfectant or sanitizer.

Please always follow the instructions of the manufacturer when using cleaning or disinfecting agents and rinse the toys thoroughly with fresh water afterward to remove any remaining chemicals. This is particularly important for teething toys.

Bath toys like the Pluï Rainball and the Pluï Rain Cloud can be opened for cleaning. We recommend doing so frequently to prevent the growth of mold and germs.

All MOLUK silicone toys (Oogi, Hix, Mox, Oibo & Nigi Nagi Nogi) are dishwasher-safe and can be sterilized in boiling water.

Allow the toys to cool down before using them.
